CREST APP Kali Candidate Machine AMI Setup Guide

- CREST APP Kali Candidate Machine AMI Setup Guide
 - Set up the machine in AWS
 - Accessing the machine
 - Connecting via SSH
 - Connecting via RDP
 - Allowing RDP connections
 - Connect to the machine

Set up the machine in AWS

If you do not already have an AWS account, you can create one here: https://aws.amazon.com/account/sign-up

The AMI is available in the following regions:

- Europe (London) | eu-west-2
- Asia Pacific (Singapore) | ap-southeast-1
- Asia Pacific (Sydney) | ap-southeast-2
- US East (N. Virginia) | us-east-1
- 1. Launch instance

| Launch instance To get started, launch an Ar | nazon | EC2 instance, which is a virtual server in the cloud. |
|---|-------|---|
| Launch instance | • | Migrate a server [2] |

2. Name your instance

| Name and tags Info | |
|-------------------------|---------------------|
| Name | |
| CREST Candidate Machine | Add additional tags |

- 1. Search for the following based on your region:
 - Europe (London): ami-014375bcb4e0c3728
 - Asia Pacific (Singapore): ami-04a0d75c1c052ec20
 - Asia Pacific (Sydney): ami-00fb331e0c116f252
 - US East (N. Virginia): ami-07f8b74abb4e310ba
- 2. Select the AMI that appears
- 3. Select desired instance type

If you want to host the machine for free, select type t2.micro. This is only available to Free tier eligible customers (more information about this can be found here)

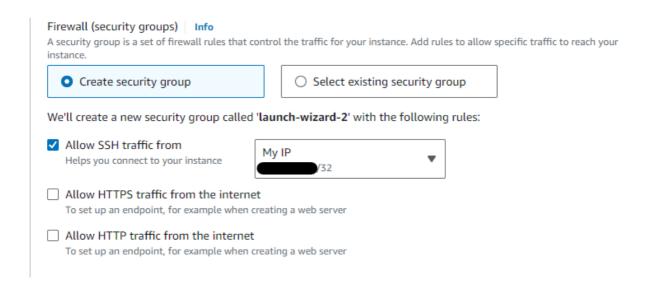

| stance type t2.micro | Free tier eligible |] |
|--|--------------------|------------------------|
| Family: t2 1 vCPU 1 GiB Memory Current generation: true | ···· | All generations |
| On-Demand Windows base pricing: 0.0178 USD per Hour | • | |
| On-Demand RHEL base pricing: 0.0732 USD per Hour On-Demand SUSE base pricing: 0.0132 USD per Hour | | Compare instance types |
| On-Demand Linux base pricing: 0.0132 USD per Hour | | |

4. Create or select your key pair

| ▼ Key pair (login) Info | |
|--|------------------------------|
| You can use a key pair to securely connect to your instance. Ensure that you have accorded before you launch the instance. | ess to the selected key pair |
| Key pair name - required | |
| CREST-Candidate-Key | C Create new key pair |

5. Configure the network

• If you want to allow SSH into the machine, select it and set the desired connection IP. (RDP will be set up in a later step)

6. Configure storage

• Leave this setting as the default

① Please note this storage will incur a cost. Changing this setting may result in the Kali machine not working. More information on storage costs can be found here ①

| ▼ Configure storage Info | Advanced |
|--|----------|
| 1x 61 GiB gp3 Root volume (Not encrypted) | |
| ③ Free tier eligible customers can get up to 30 GB of EBS General Purpose (SSD) or Magnetic storage | · × |
| Add new volume | |
| Olick refresh to view backup information The tags that you assign determine whether the instance will be backed up by any Data Lifecycle Manager policies. | C |
| 0 x File systems | Edit |

7. Launch the instance

• Once the above steps are complete, you can launch the instance

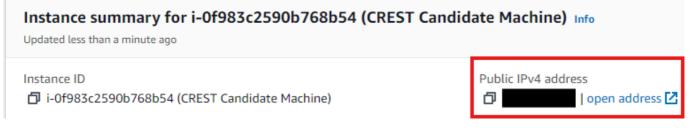

Accessing the machine

Login Credentials

- Username: kali
- Password: kali

There are two ways to access the machine. You can use either SSH or RDP. We recommend RDP for the best experience.

You will need the public IPv4 address to access the machine. This can be found in the instance summary:

Connecting via SSH

To connect via ssh use the following command: ssh -i <PATH-TO-YOUR-KEY-PAIR> kali@<MACHINE-PUBLIC-IP>

Connecting via RDP

Allowing RDP connections

To connect via RDP, you have to allow incoming RDP connections. You can do this as follows:

1. Select the Security tab from your instance summary

2. Inside Inbound rules select the launch wizard for your security group

| ▼ Inbound rules | | | | | |
|-----------------|------------------------|------------|----------|--------|-------------------|
| Q Filter rules | | | | | |
| Name | Security group rule ID | Port range | Protocol | Source | Security groups |
| - | sgr-030177f6c05ae050b | 22 | TCP | /32 | launch-wizard-2 🔼 |

3. Select the Security group ID

| Name ▼ Security group ID ▼ □ - sg-04732ac3652be8549 ▼ | Security group name = la | aunch-wizard-2 X Clear filters | |
|---|--------------------------|--------------------------------|----------|
| <u>sg-04732ac3652be8549</u> | Name | ▼ Security group ID | ∇ |
| | | sg-04732ac3652be8549 | |

4. Edit inbound rules

| Inbound rules (1) | [| C | Manage tags | Edit inbound rules | 1 |
|-------------------|---|---|-------------|--------------------|---|
| | ٦ | | | | • |

5. Add new RDP rule

| Custom TCP | |
|------------|---|
| Q RDP | × |
| RDP | |

6. Set desired Source

| Custom | |
|--------------|----|
| Custom | ~ |
| Anywhere-IPv | /4 |
| Anywhere-IPv | /6 |
| My IP | |

Connect to the machine

- 1. Using your desired RDP client, type in the public IP of the AWS machine and connect.
- 2. Leave the session as Xorg
- 3. sign in using the credentials provided above

| Login to kali | |
|---------------------------------|--------------------------------------|
| Session username password | Xorg 🗨 kali ***** OK Cancel |
